CSS Assignment 12 Feb 2024

1. **Link Styling for Navigation Menu:**
   Design a CSS style for the navigation menu links on a website. Ensure that the links change color and display an underline when hovered over to provide visual feedback to users.

2. **Custom Bullet Points for Lists:**
   Create a CSS style for an unordered list used to display features or benefits of a product/service. Customize the bullet points to be square icons and change their color to match the theme of the website.

3. **Table Formatting for Product Comparison:**
   Format a table used for comparing different products on an e-commerce website. Apply borders to the table cells, highlight the header row with a different background color, and add padding to improve readability.

4. **Styling Hyperlinks in Articles:**
   Implement CSS styles for hyperlinks within articles or blog posts. Set the link color to blue and change it to red when hovered over. Additionally, remove the default underline decoration for a cleaner look.

5. **Ordered List for Step-by-Step Instructions:**
   Customize the appearance of an ordered list used for step-by-step instructions. Use numbers enclosed in circles as list markers and increase the font size for better visibility.

6. **Table Layout for Pricing Plans:**
   Design a CSS layout for a pricing comparison table. Apply alternating background colors to table rows for better differentiation and add borders around the entire table for a more structured appearance.

7. **Link Styling for Call-to-Action Buttons:**
   Style links used as call-to-action buttons on a landing page. Apply a background color, change the text color to white, and add padding to make the buttons more visually appealing and clickable.

8. **List Formatting for FAQs:**
   Format an unordered list used for frequently asked questions (FAQs). Replace bullet points with custom icons (e.g., question marks) and adjust the spacing between list items to improve readability.

9. **Table Styling for Data Visualization:**
   Customize the appearance of a table used to display statistical data or financial information. Apply a border-collapse property to merge cell borders and enhance the table's visual clarity.

10. **Link Styles for Footer Navigation:**
    Create CSS styles for links in the footer section of a website. Decrease the link opacity to differentiate them from the main content, and change the color to a lighter shade to maintain visibility against the background color.
